

AI-BASED EMPLOYEE ATTENDANCE AND SALARY MANAGEMENT SYSTEM

PRESENTED BY:PRIYADHARSHINI R
DEPARTMENT:AIDS-C

INTRODUCTION

Attendance management is essential in every organization.

Manual attendance is time-consuming and error-prone.

Proxy attendance affects accuracy.

Face Recognition provides an intelligent and contactless solution.

The project automates employee attendance using Artificial Intelligence.

PROBLEM STATEMENT

Problem Statement

Manual attendance consumes time.

Human errors in attendance records.

Proxy attendance.

High maintenance cost of biometric devices.

Need for an automated attendance system.

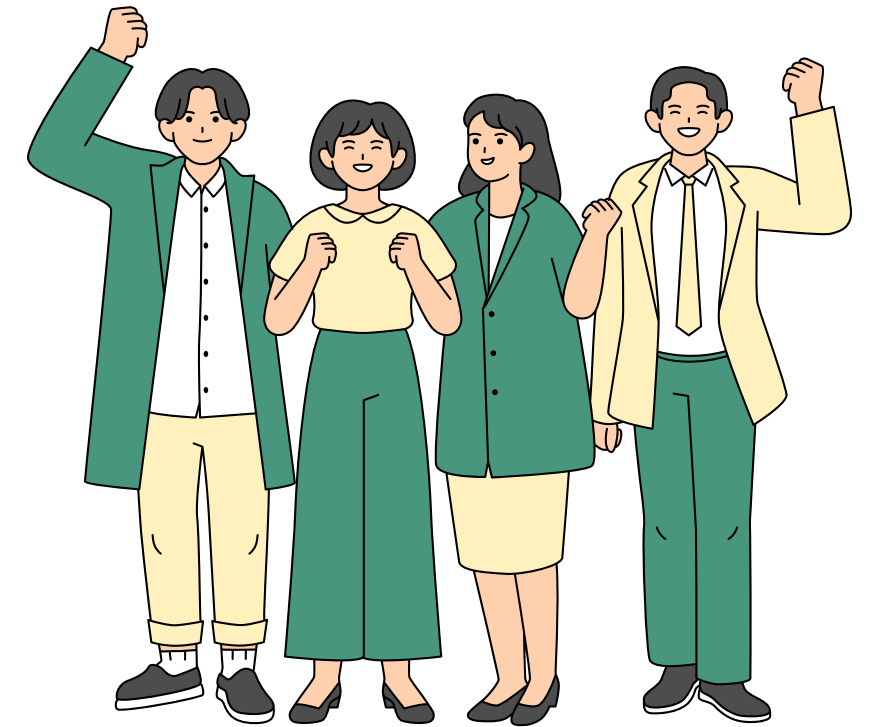

OBJECTIVES

MAIN OBJECTIVE

To develop an AI-Based Employee Attendance Management System using Face Recognition technology.

SPECIFIC OBJECTIVES

- Employee Registration
- Face Registration
- Automatic Face Recognition
- Attendance Marking
- Attendance History
- Salary Management
- Report Generation

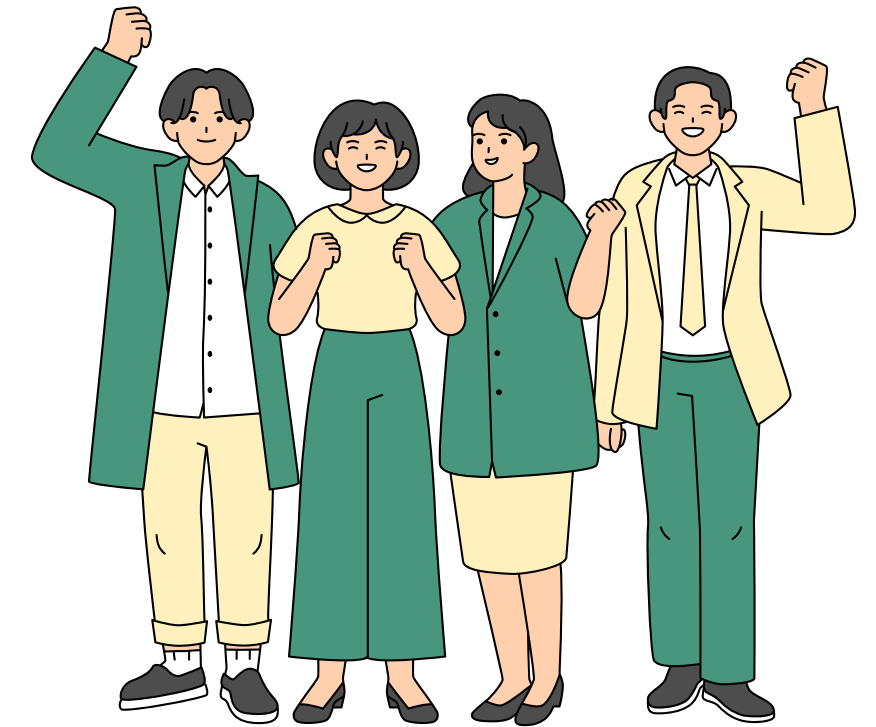

Software & Hardware Requirements

SOFTWARE

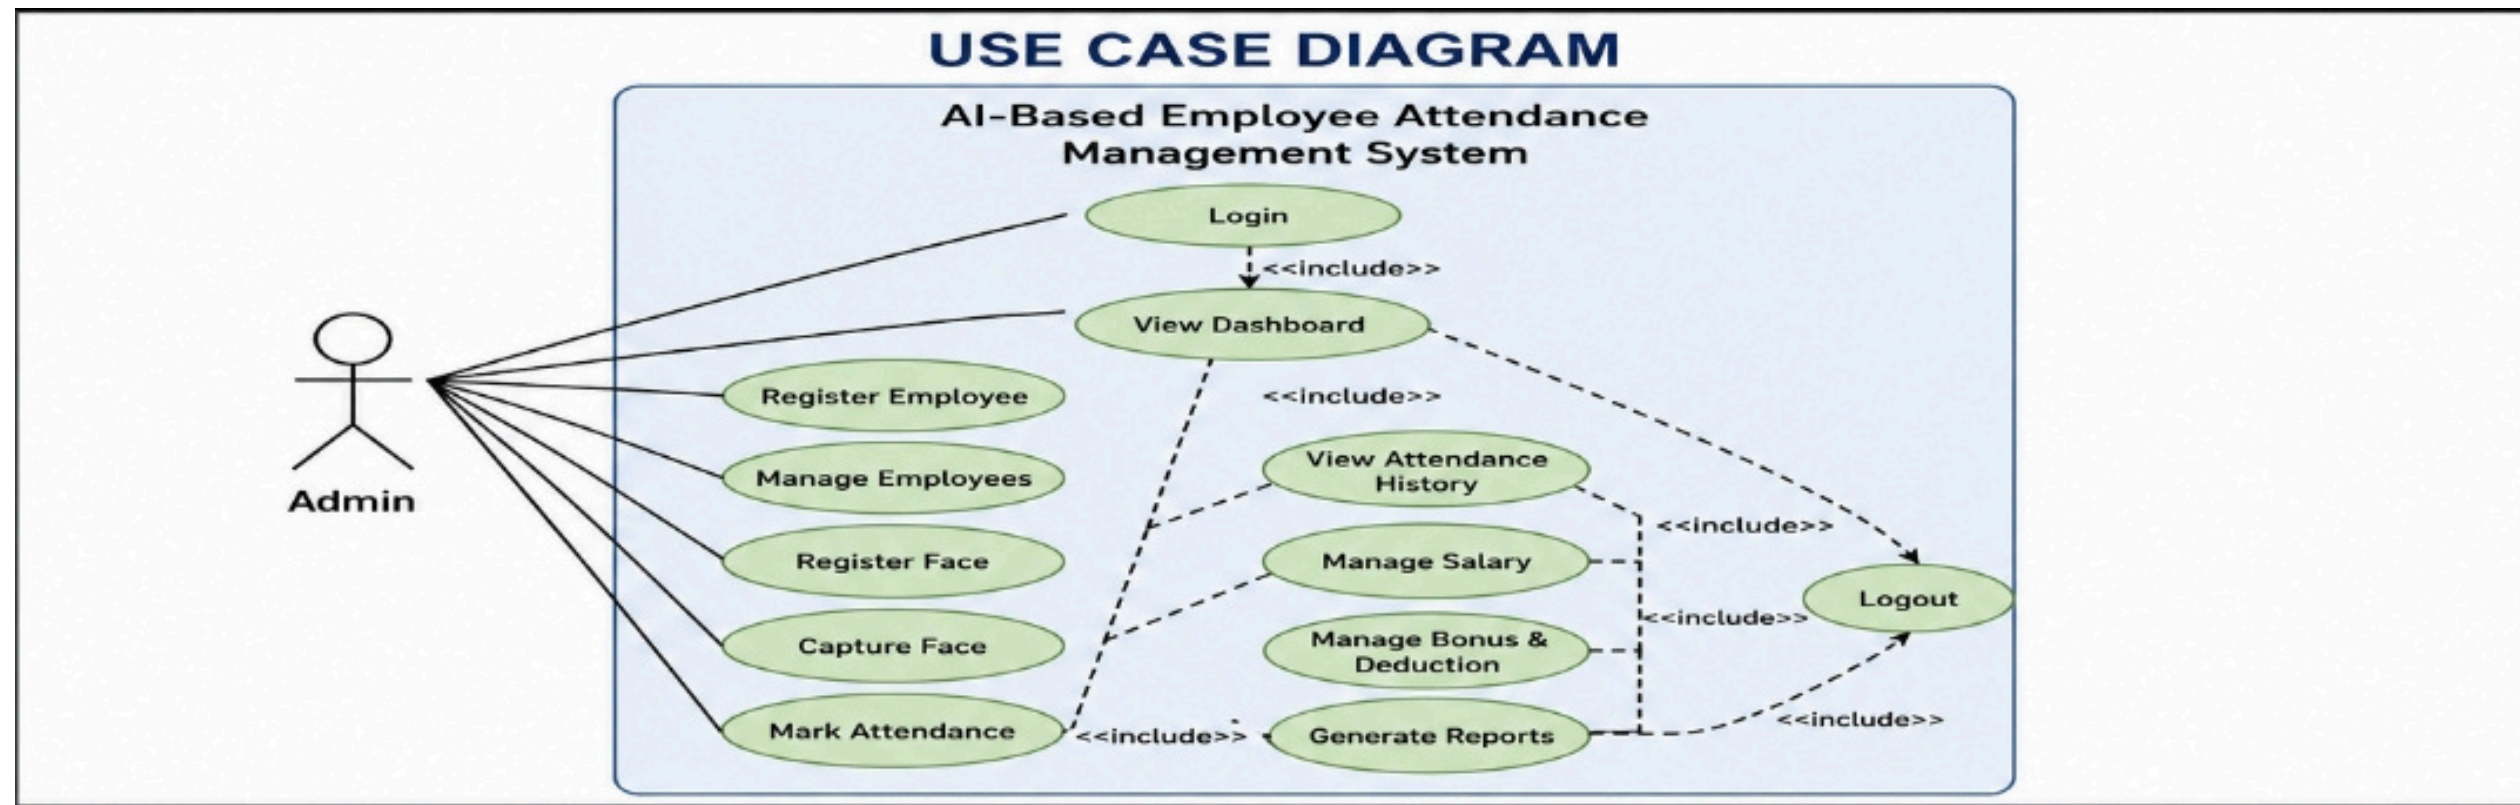

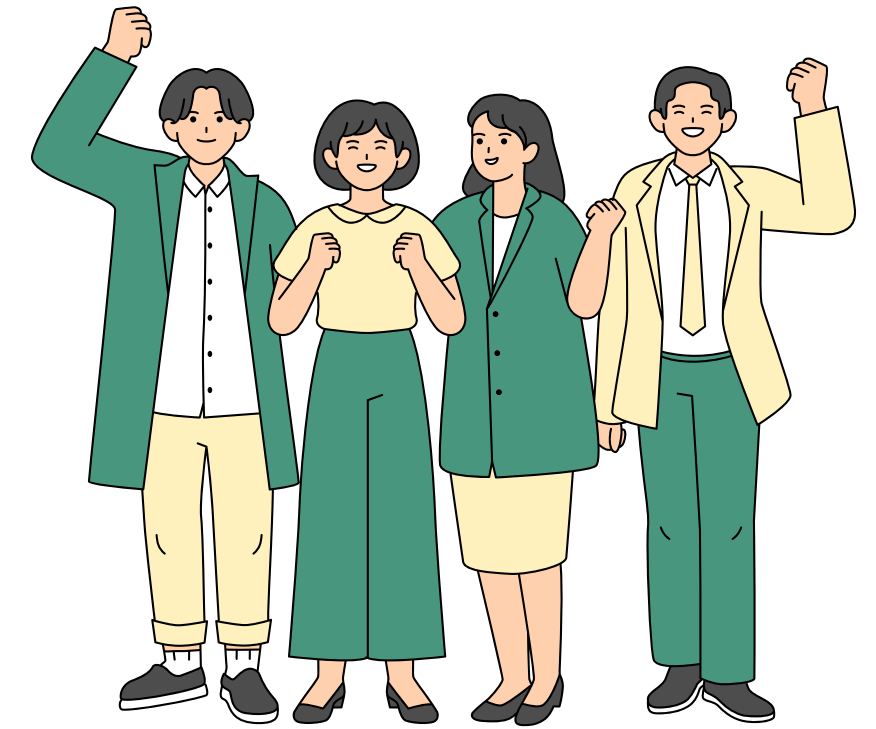

- Python
- Flask
- MySQL
- OpenCV
- Face Recognition
- HTML
- CSS
- JavaScript

HARDWARE

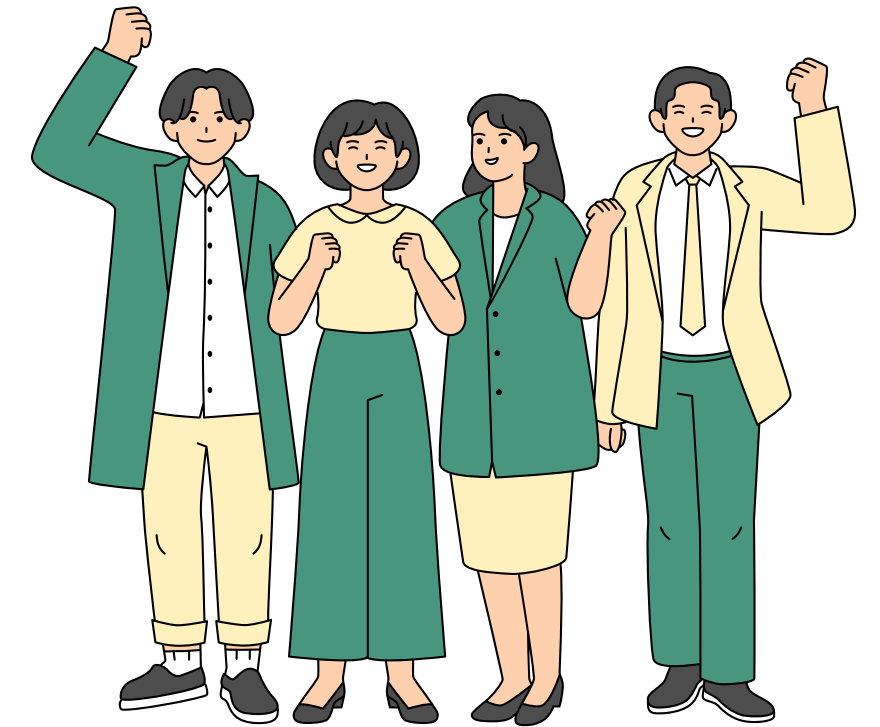

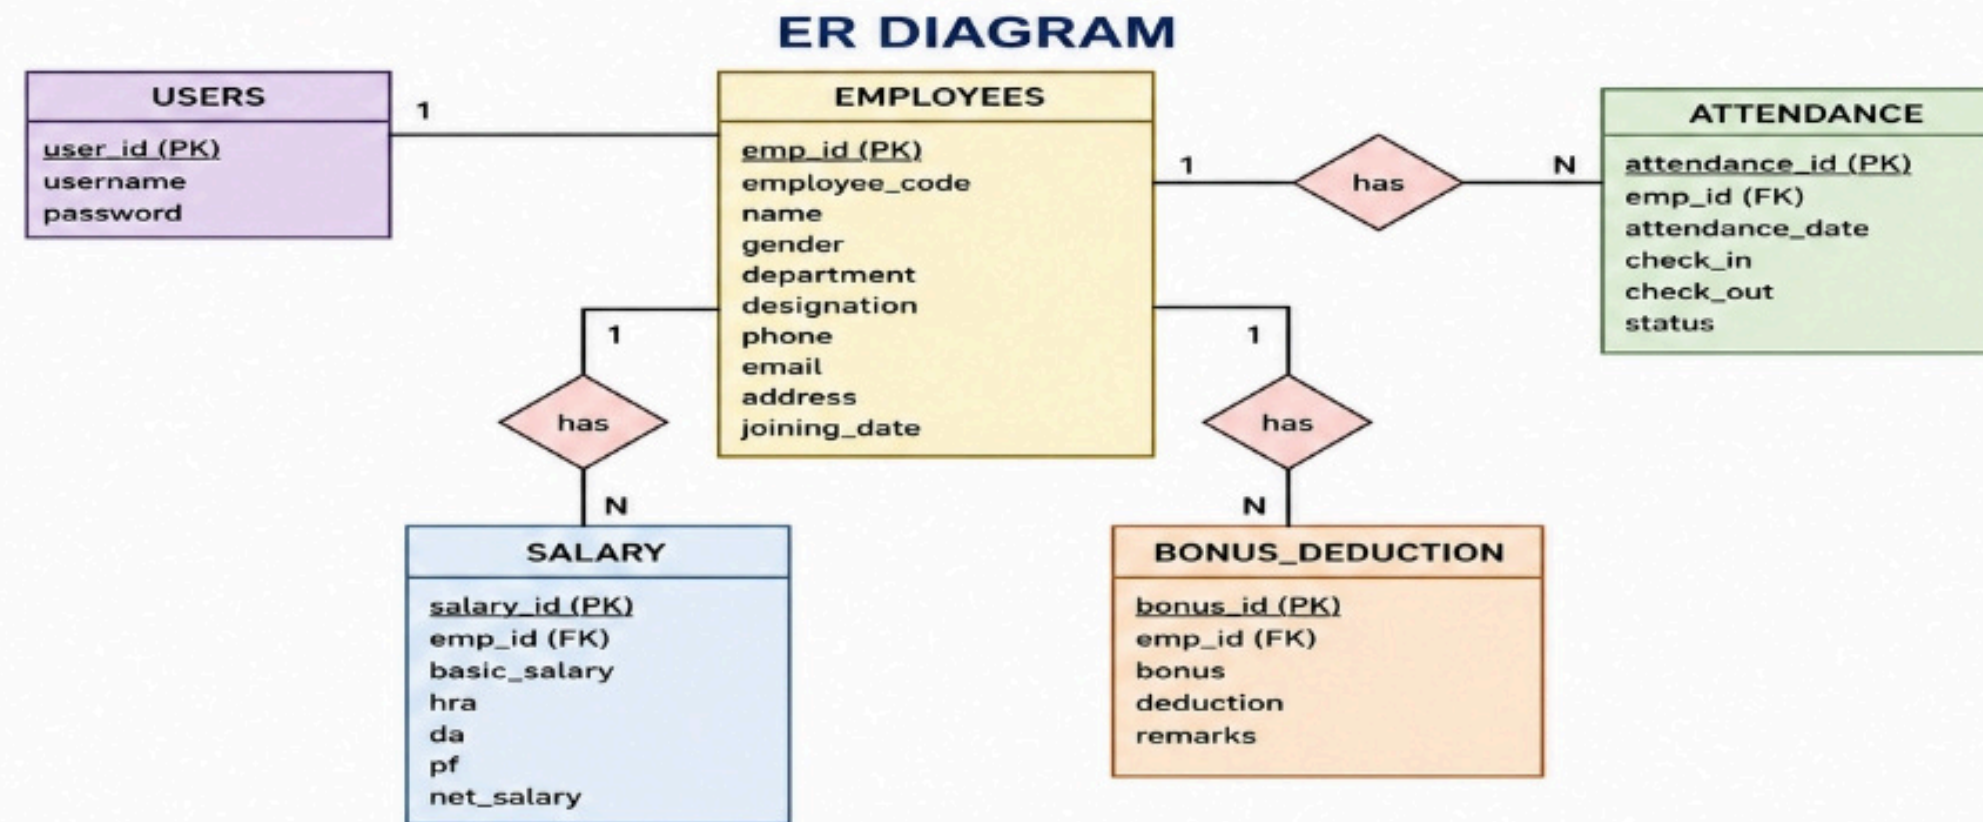

- Windows PC
- Webcam
- Intel i3/i5 Processor
- 4 GB RAM

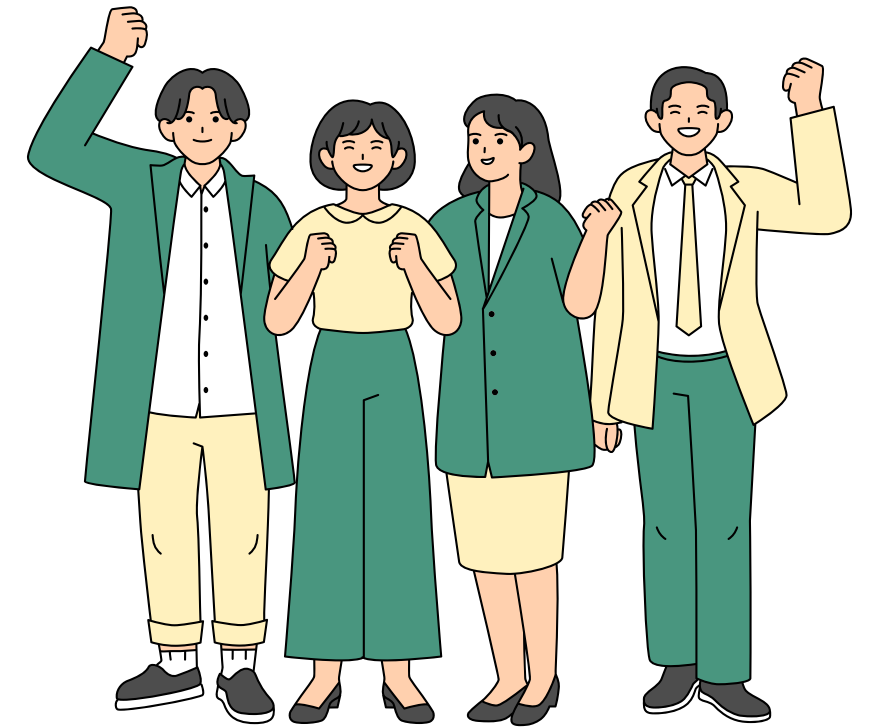

Use Case Diagram

ER Diagram

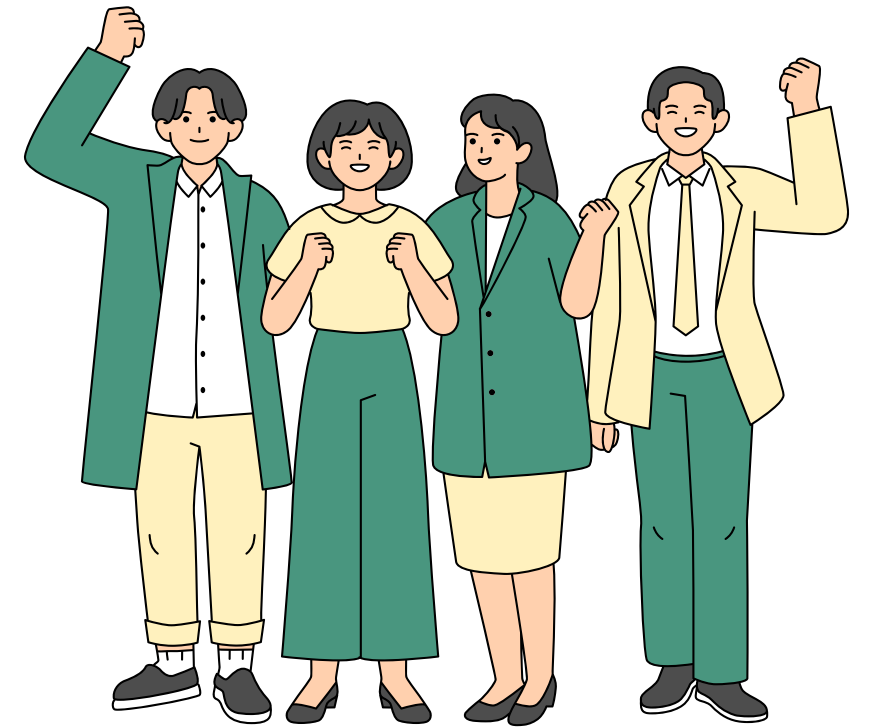

System Architecture

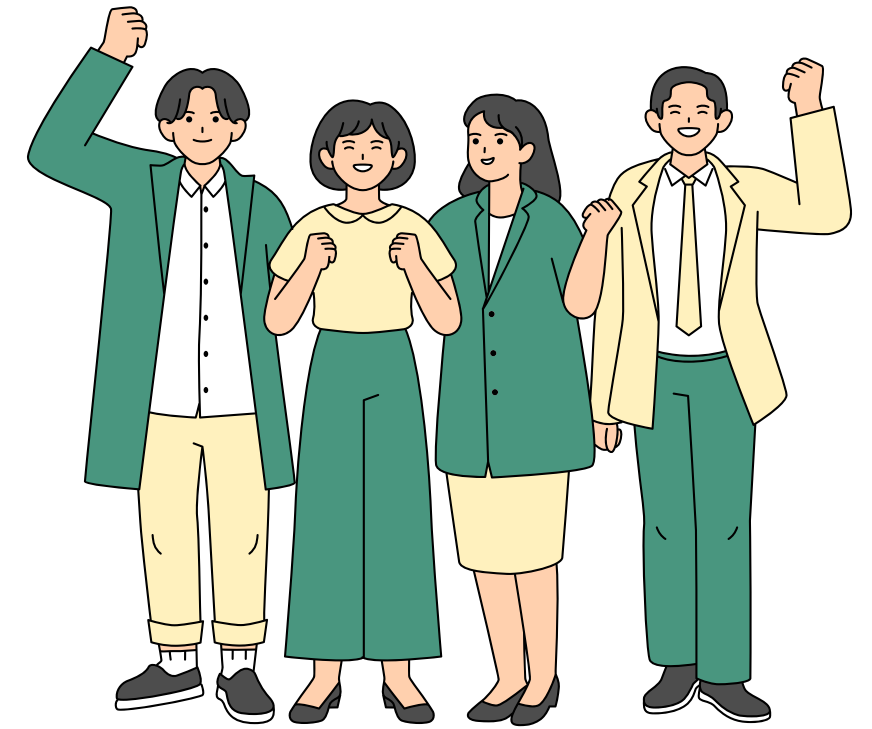

Modules

- Login Module
- Dashboard Module
- Employee Registration
- Face Registration
- Face Recognition
- Attendance Module
- Attendance History
- Salary Management
- Reports

Technologies Used

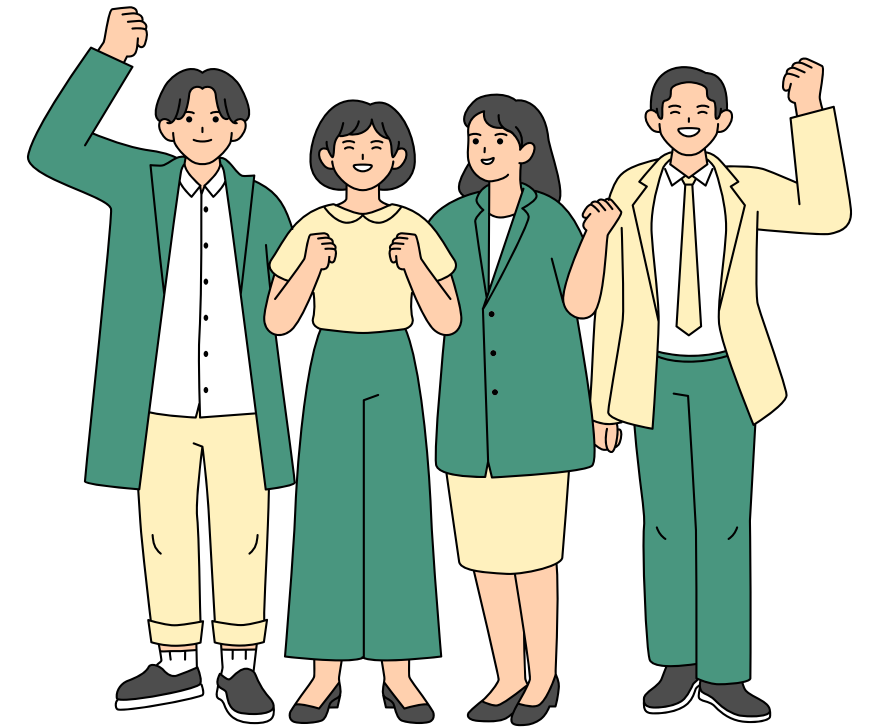

- Python
- Flask
- OpenCV
- Face Recognition
- NumPy
- MySQL
- HTML5
- CSS3
- JavaScript
- ReportLab

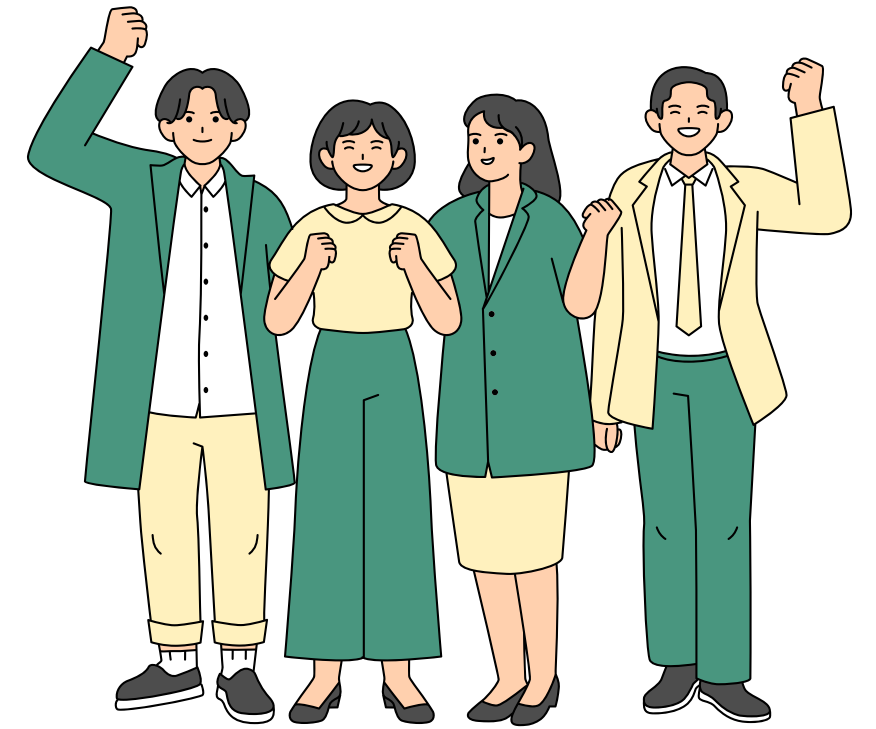

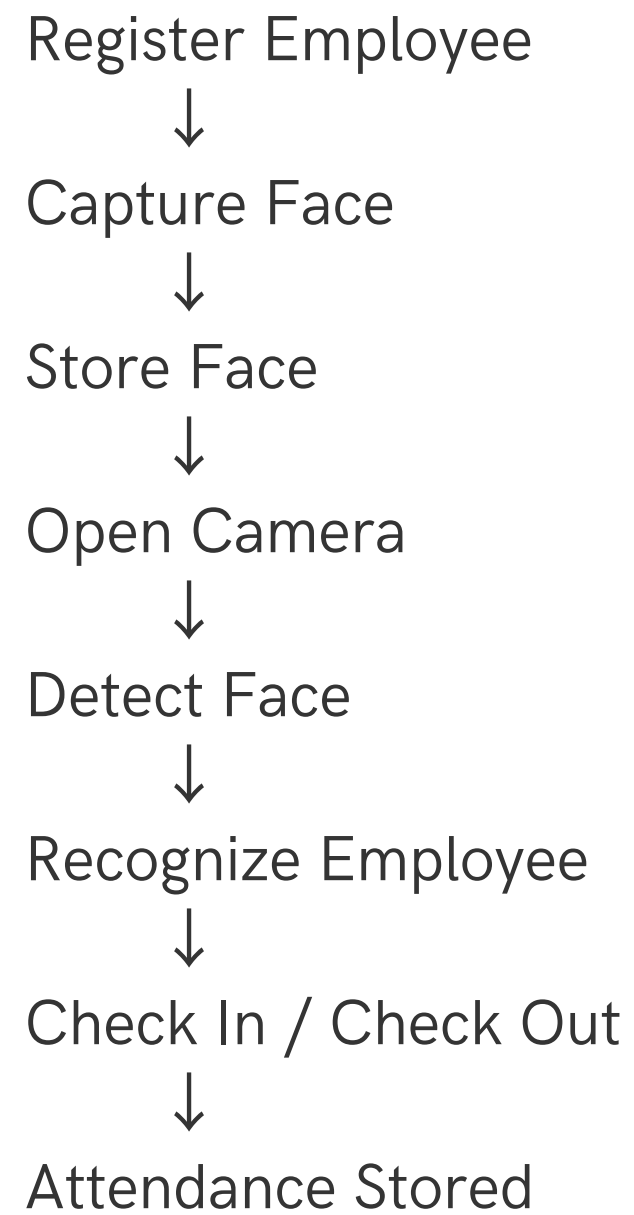

Database Design

TABLES USED

Users
Employees
Attendance
Salary
Bonus & Deduction

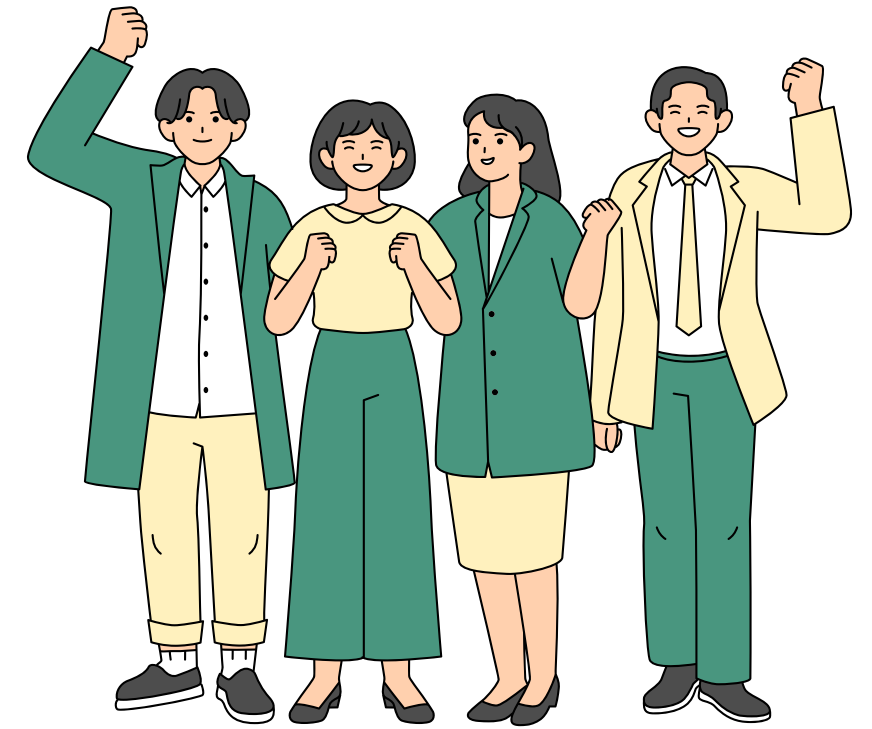

Project Workflow

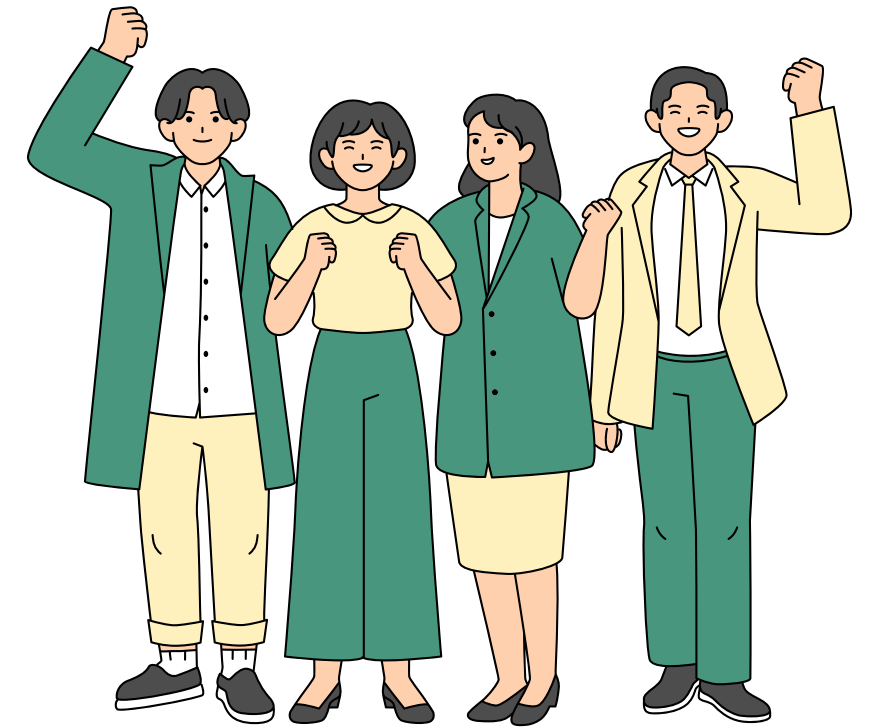

Project Features

- Secure Login
- Employee Registration
- Face Registration
- Face Recognition
- Automatic Attendance
- Attendance History
- Salary Management
- PDF Report Generation

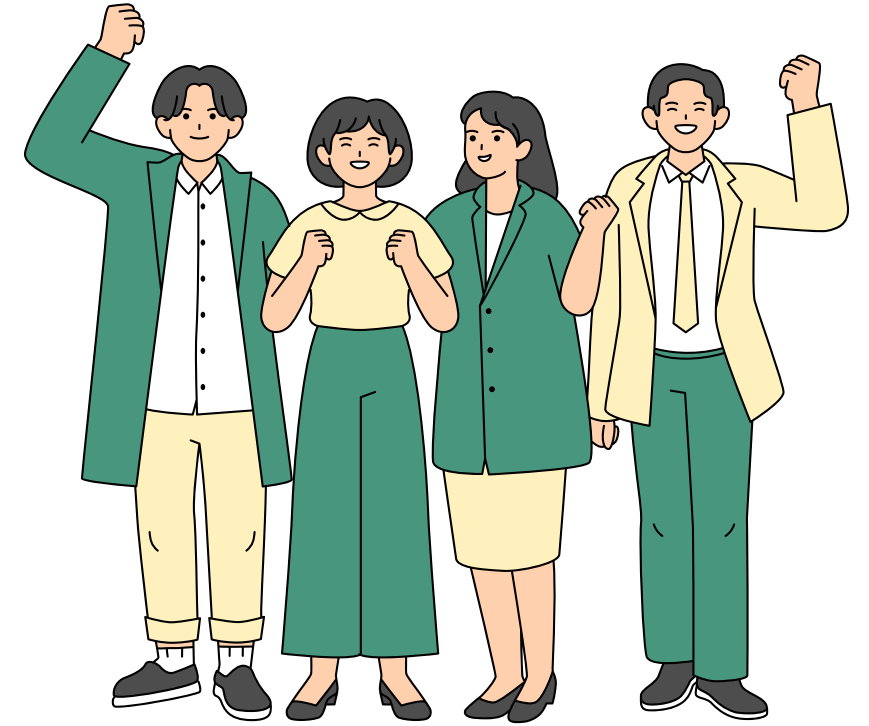

Advantages

- Fast Attendance
- Accurate Recognition
- Contactless System
- Prevents Proxy Attendance
- Easy Report Generation
- User-Friendly Interface
- Secure Database

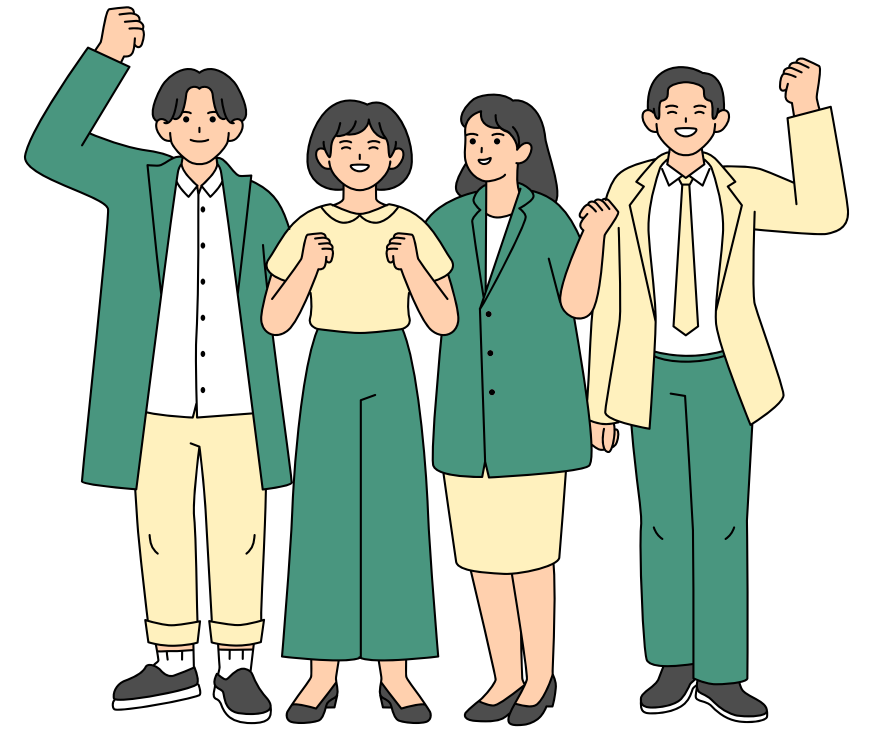

Limitations

- Good Lighting Required
- Camera Quality Affects Accuracy
- Face Mask May Reduce Accuracy
- Recognition Time Increases with Large Databases

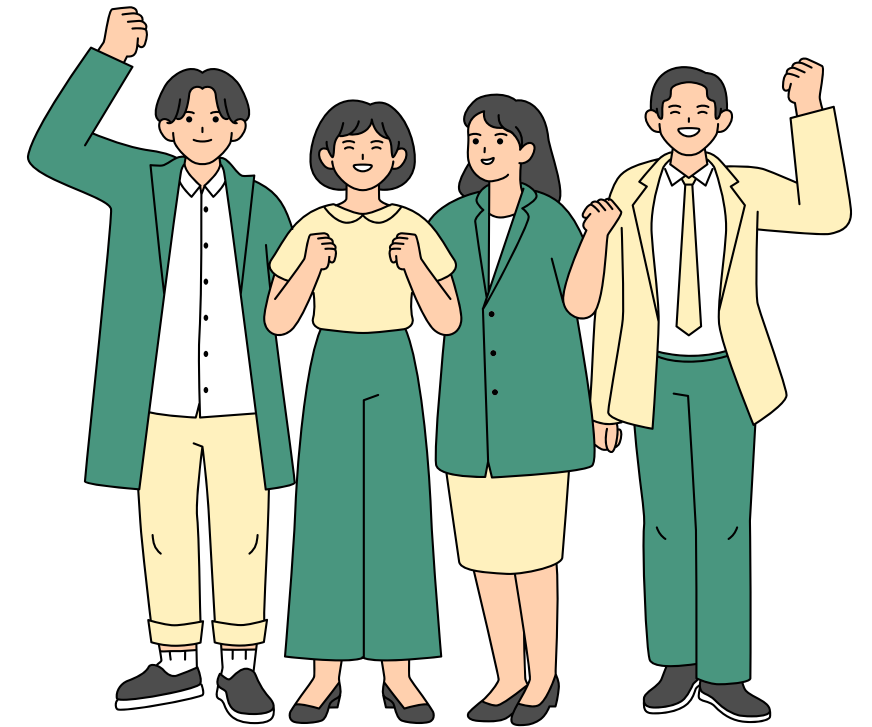

Future Scope

- Cloud Deployment
- Mobile Application
- Deep Learning Models
- GPS Attendance
- Email Notifications
- Payroll Automation
- Employee Analytics

Conclusion

The AI-Based Employee Attendance Management System Using Face Recognition successfully automates employee attendance using Artificial Intelligence and Computer Vision. The system accurately recognizes employees, records attendance, reduces manual effort, prevents proxy attendance, and improves organizational efficiency.
